ecoGlaze

Converts your existing single glazing into double glazing

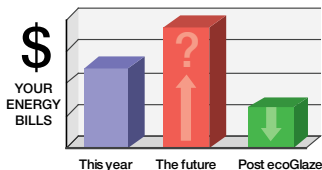

ecoGlaze creates a thermal air pocket insulating you from outside conditions. It reduces heat loss by 50% through your window and door panes while keeping you comfortable inside, winter and summer.

Use ecoGlaze instead of heavy curtains and pelmets, so you can really enjoy your views all year round.

ecoGlaze virtually eliminates window condensation - no more water damaged flooring and window frames.

✓ **Significant savings on current energy usage and costs**
Energy costs are set to rise rapidly. You will save on today's energy costs, and even more in the future. The benefits are immediate. #1

✓ **50% (at least) cheaper than replacement double glazed windows**
ecoGlaze provides better thermal performance. It's faster, cheaper and cleaner to install.

✓ **No change in appearance or operation of your doors or windows**
There are no structural alterations required to your windows or doors; especially critical for heritage aspects, so you retain your home's existing character. Our specially designed mouldings blend with your home so it looks like it was always there.

✓ **Clean and easy installation**
ecoGlaze is straightforward to install because we use your existing windows and doors. #2

✓ **Great for YOUR environment while helping save THE environment**
ecoGlaze improves the thermal efficiency of your windows and doors to reduce your home's energy costs and keeps you more comfortable. Your existing doors and windows don't go to landfill - don't replace it, ecoGlaze it.

#1. For reasonably well insulated homes. #2. Except steel or domestic aluminium frames.

" I love ecoGlaze on our windows because our home operates at a more comfortable temperature and we have cut our energy consumption dramatically.... I can't even see that it's there " ... Rob from Kyneton
